JointFlash™ is a fast, easy-to-install flashing solution that slides conveniently behind siding and stays securely in place as you nail, eliminating the need for on the job cutting, while improving the durability of fiber cement and wood lap siding.

INSTALLATION IS AS EASY AS 1, 2, 3

- 1** Install the first pieces of lap siding without nailing the end near the butt joint.
- 2** Simply tuck the piece of JointFlash™ behind the loose end of the previously installed siding. Make sure the JointFlash™ is centered on the joint and is overlapping by at least one inch.
- 3** Install the remaining piece of siding and nail down the butt joint as usual to hold the JointFlash™ securely in place.
